DESIGN

Seilo®CRYL coatings can be designed to match the architecture, furnishings, or corporate identity of your company. Bright, friendly colors create pleasant workplaces with high hygiene standards. With Colour chips, coloured quartz and pigments are highly durable floors can be made individual, decorative and attractive. The resilient setting of the flooring enable fatigue-free working. With an almost seamless surface, these floors are successfully used in kitchens, but also in laundry and storage rooms, cold storage and technical rooms, as well as sanitary and wellness areas.

ANWENDUNGSBEREICHE

- Catering and hotel kitchens,
- Commercial and hospital kitchens

Seilo® CRYL

The fast flooring solution for kitchens

Today more than ever, modern and functional industrial floors must fulfil the industry-specific requirements of the food production and processing industry. Since decades, seamless synthetic resin coatings are providing technically flawless flooring solutions for commercial kitchens, where hygiene and ease of cleaning, thermal, mechanical, and chemical resistance, safety and slip resistance, and visual design options are required.

We, Seitz+Kerler, from Lohr am Main in Lower Franconia, are distributing and installing Seilo® CRYL synthetic resin flooring for over 60 years. Seilo®CRYL kitchen floors are characterized by particularly fast reaction times and are fully loadable two hours after completion. Pure synthetic resin-based methacrylate resin coatings, which can be finished decoratively with coloured quartz or coloured chips, have proved particularly successful in commercial kitchens in restaurants, hotels, clinics, and event venues. We are very successful in the renovation of old load bearing old, stable ground surfaces such as concrete, screed, or tiles and the installation of coatings in new buildings of all kinds.

After detailed and expert advice on site, our own experienced installation teams will prepare the substrate and coat the floor. Take advantage of our many years of experience in the flooring sector.

■ PRODUCT PROPERTIES

Seilo®CRYL floor coatings consist of low to medium viscosity solvent-free methacrylate reaction resins (MMA), integrated into a two-component system with a build-up thickness of 0.5 - 8 mm.

■ ADVANTAGES

- Extremely fast curing, fully loadable after 2 hours
- Renovation without interruption of operations
- Seamless, hygienic, easy to clean
- Excellent chemical resistance
- High pressure and abrasion resistance
- Decorative finish with coloured quartz and chips
- Smooth to non-slip finish
- Installation even at temperatures below 0°C
- Suitable for new buildings and renovations on various surfaces

■ OCCUPATIONAL SAFETY AND HYGIENE

Whether hot grease leaks, cookware falls on the floor, beverage crates are dragged across the floor, or hot water with cleaning agents is used – our Seilo®CRYL floor coating ensure work safety and a hygienic working environment.

The special jointless design and curves between floors and walls or ascending building sections enable easy cleaning and prevent of dirt accumulation – while at the same time high slip resistance and load-bearing capacity is ensured. The impermeable surface prevents the penetration of liquids and

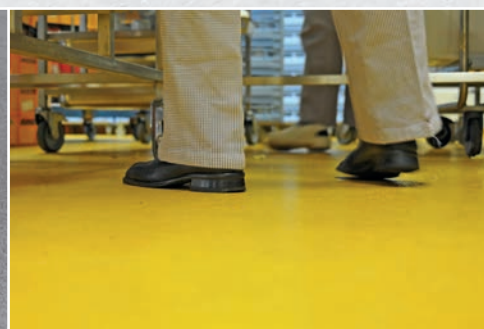

protects the entire floor structure. The construction with a necessary slope and the professional and seamless connection of the floor covering to stainless steel channels and drains guarantee optimum hygiene. Seilo®CRYL flooring fulfils all current safety and hygiene regulations of the food industry. Depending on the installation method or the required slip resistance level, the surface structure can be finished from glossy smooth to rough and non-slip.

■ INSTALLATION

Depending on the size of the room, we can install 50 to 400 m² per day. Seilo®CRYL systems are fully loadable after 2 hours, so downtimes can be minimized. They can be installed as dust-binding impregnations, coloured sealings, self-levelling coatings and as trowel and scatter coatings in thicknesses of 0.5 to 8 mm on all load-bearing surfaces. We guarantee a seamless finish and seamless transition to all built-in components, as well as at the wall-floor transition and at appliance plints.

hygienic and easy to clean
